SUMMARY

Final-year B.Tech Computer Science student specialising in Artificial Intelligence, building machine learning and LLM applications in Python: transformer fine-tuning, LangGraph agents with RAG, and LLM features on Gemini and local Llama models. Looking for an AI/ML or Generative AI engineering role; graduating in 2027.

EDUCATION

Bennett University, Greater Noida

2023 – 2027

B.Tech in Computer Science and Engineering (Specialisation in Artificial Intelligence) | CGPA: 7.99 / 10

Coursework: Data Structures, Algorithms, Operating Systems, DBMS, Machine Learning, Generative AI

TECHNICAL SKILLS

Languages: Python, C++, Java, SQL

Machine Learning: PyTorch, TensorFlow, Keras, Scikit-learn, CNNs, GANs, VAEs, Reinforcement Learning (DQN)

Generative AI and NLP: Hugging Face Transformers, BERT, LegalBERT, DistilBERT, LangChain, LangGraph, RAG, ChromaDB, Gemini API, Groq, Ollama

Computer Vision: OpenCV, YOLOv8, U-Net, image segmentation

Backend and Data: FastAPI, REST APIs, MySQL, MongoDB, Pandas, NumPy, Matplotlib, Tableau

Tools: Git, GitHub, Docker, Docker Compose, Streamlit, Pytest, Jupyter, CUDA

PROJECTS

FinReport Agent: Q&A over Company Filings

github.com/gilgamish-hub/finreport-agent

Python, LangGraph, LangChain, ChromaDB, Groq, Ollama, Streamlit

- Engineered a LangGraph agent that answers questions on company filings with cited pages: hybrid retrieval (embeddings + BM25), passage grading, query rewriting, a calculator tool and number checks.
- Raised accuracy on numerical questions over plain RAG from 50% to 70% (gpt-oss-120b) and from 36% to 66% (4B model on a laptop GPU) on 145 held-out FinanceBench questions, both significant ($p < 0.01$).
- Deployed a live demo with saved runs, an answer cache, a four-model fallback and PDF upload, covered by 33 offline tests.

Legal Contract Auditor

github.com/gilgamish-hub/legal-auditor-ai

Python, PyTorch, Hugging Face Transformers, Scikit-learn, Streamlit

- Curated a dataset of 9,149 clauses in 19 clause types plus "Other" from the lawyer annotations of the CUAD corpus (510 contracts), split into train, validation and test sets by contract.
- Fine-tuned LegalBERT to 88.4% accuracy and 0.864 macro F1 on 76 held-out contracts, against 81.8% and 0.811 for a TF-IDF and logistic regression baseline.
- Shipped a Streamlit app that turns a contract PDF into a clause-by-clause audit: each clause gets a type, a risk level and the words that most affected the prediction, exported as a PDF report.

InternAI: Internship Recommendation System (Smart India Hackathon)

github.com/gilgamish-hub/innovace

Python, Scikit-learn, Gemini API, Ollama, Streamlit

- Led a team of 6 to build a TF-IDF and cosine-similarity recommender over 6,500+ internship listings.
- Integrated three LLM features (skill-gap analysis, feedback on an uploaded resume PDF, learning roadmap) using Gemini, with automatic fallback to a local Llama 3 model through Ollama.

IT Support Agent (rule-based policy engine)

github.com/gilgamish-hub/it-support-agent

Python, Pydantic, Pytest, Streamlit

- Designed a 5-stage pipeline for IT support requests (intent and entity parsing, knowledge-base and past-ticket retrieval, policy decision, tool execution, response generation) with Pydantic state models.
- Implemented 10 tool functions (account unlock, VPN renewal, laptop dispatch, security alerts, audit-log export) and a 17-test Pytest suite covering 15 request scenarios.

CERTIFICATIONS

Deep Learning Specialization (DeepLearning.AI) | Getting Started with Accelerated Computing in CUDA C++ (NVIDIA)
Algorithmic Toolbox (UC San Diego) | Object-Oriented Data Structures in C++ (University of Illinois)
